A partial clone (AAT69651) was isolated by subtractive hybridisation between normal mammary and transformed epithelial cDNAs, isolation of an antisense ING1 cDNA insert that caused increased cell proliferation, and use of the insert to screen normal human fibroblast and HeLa cDNA libraries. The complete ING1 sequence was then obtd. by 5'RACE. ING1 is localised to the 13q33-34 chromosome region, to which a number of human cancers have been mapped. ING1 nucleic acids can be used in the diagnosis of breast cancer; a decreased level of ING1 mRNA indicates cancerous cells. They can also be used in gene therapy methods to block the proliferation of cancer cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Isolated tumour suppressor gene, ING1 - useful to develop products for inhibiting or increasing cell proliferation, in particular for treatment or diagnosis of cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI; 1997-332781/30.

  This is the nucleotide sequence of a human ING1 (INhibitor of Growth) that codes for a pl331NG1 polypeptide (see AAW79675), a novel inhibitor of cell growth and a candidate tumour suppressor. ING1 is a new gene that is expressed in normal mammary epithelial cells, but which is expressed only at lower levels in several cancerous
                                                                                                      Modulating eukaryotic apoptosis by increasing p33ING1 using p33ING1 derivatives, to induce apoptosis in cand in the investigation of apoptotic pathways
                                                                                                                                                                                                                                                                                                                                                                                                                    Homo

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC mammary epithelial cell lines and is not expressed in many primary CC brain tumours. To isolate ING1, a subtractive hybridisation of CC breast cancer cell line cDNAs was performed with cDNA from normal CC mammary epithelial cells, and subtracted cDNAs were cloned into CC retrovirus vector pLNCX. Following passage through a packaging CC line, normal mouse mammary epithelial cells were infected, and CC infected cells were injected into nude mice. Purative transforming CC fragments from tumours were isolated by PCR (see AAV62290-91) and CC screen normal human fibroblast and HeLa cell cDNA libraries. 2 CC clones were sequenced to obtain a partial ING1 sequence (see CAAV62285). The complete cDNA sequence was then obtained by RACE. A CC claimed method to potentiate apoptosis in a eukaryotic cell involves administering an active p33ING1 peptide or an CC inhibiting apoptosis in a eukaryotic sell involves administering an active p33ING1 activity in a eukaryotic cell, and an isolated eukaryotic characteristics of a eukaryotic cell, and cassay for determining the level of p33ING1 activity in a eukaryotic cell substantially free of p33ING1 activity. The invention discloses ING1 derivatives or call and an isolated eukaryotic cell substantially free of p33ING1 activities or ariants that may be used to induce apoptosis in eukaryotic cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Percent Similarity:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 15
                                                                                           This is the nucleotide sequence encoding the human p33-ING1 protein, cused in the method of the invention. The ING1 gene encodes p33-ING1 which can be used to modulate the activity of, isolate or detect p53. Expression of the ING1 and p53 genes in a mammalian cell results in normal growth regulation anchorage-dependent growth and apoptosis as a response to irreversible DNA damage and other cellular insult. Inhibition of expression of either gene results in a loss of cellular growth control, anchorage independent growth, inhibition of apoptosis and resistance to radiation and cytotoxic drugs. The p33-ING1 is a component of the p53 signalling pathway that cooperates with p53 in negative regulation of cell proliferation by modulating p53 dependent transcriptional activation. Biological function of p53 signalling pathway can therefore be regulated (both enhanced or suppressed) by modulating p33-ING1 activity. The modulation of p33-ING1 activity can
                                              be used for the stimulation or restoration of the p53 pathway in anti cancer therapy or for the suppression of the p53 pathway to defend sensitive tissues from genotoxic stress or for the general
                                                                                                                                                                                                                                                                                                                                                                                                                       WPI; 1999-263685/22

                                                                                      NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 50 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N | but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 6, Application US/09601478
Patent No. 6403785
GENERAL INFORMATION:
TITLE OF INVENTION: Human TSC403 gene and human INGIL gene
TITLE OF INVENTION: Human TSC403 gene and human INGIL gene
TITLE OF INVENTION: Human TSC403 gene and human INGIL gene
CURRENT APPLICATION WUMBER: US/09/601,478
CURRENT FILING DATE: 2000-08-03
PRIOR FILING DATE: 1998-04-28
PRIOR FILING DATE: 1998-04-05
PRIOR APPLICATION NUMBER: JP H10-73234
PRIOR APPLICATION NUMBER: JP H10-38133
PRIOR FILING DATE: 1998-02-03
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               840

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ر م م

Patent No. US20020147140A1
GENERAL INFORMATION:
APPLICANT: Rosen et al.
TITLE OF INVENTION: Nucleic Acids, Proteins, and Antibodies
FILE REFERENCE: PC005
CURRENT APPLICATION NUMBER: US/09/764,877
CURRENT FILING DATE: 2001-01-17
Prior application data removed - refer to PALM or file wrapper NUMBER OF SEQ ID NOS: 4031
SOFTWARE: PatentIN Ver. 2.0
SEQ ID NO 3454
                                                                                                                                                                                                                                                                                                                                                               MetGluLeuHisSerGlnCysPheGlnAspProAlaGlu-----

Patent No. 6403785

GENERAL INFORMATION:
APPLICANT: Ostuka Pharmaceutical Co., Ltd.
TITLE OF INVENTION: Human TSC403 gene and human INGIL gene
FILE REFERENCE: 060193

CURRENT APPLICATION NUMBER: US/09/601,478

CURRENT APPLICATION NUMBER: JP H10-134679

PRIOR FILING DATE: 1998-04-28

PRIOR FILING DATE: 1998-04-28

PRIOR APPLICATION NUMBER: JP H10-73234

                                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        146,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           13,
                                                                                                                                                                                                                                                                                                                                                                                                                                         Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
